

Pattern Pieces Installation Guide

Pattern Pieces are designed to add a small hit of pattern without turning the job into a full tiling project.

Each Pattern Piece is one 500 × 200 mm toughened-glass panel. There's no grouting and no tile spacing to worry about.

Before you start

Check the wall is:

- clean and dry
- free from dust, grease and loose material
- sound and reasonably even

Small imperfections are usually fine. Large bumps or deep hollows should be dealt with before fitting.

Before you apply any adhesive, hold the Pattern Piece in position and make sure you're happy with where it will sit.

What adhesive should I use?

Use a:

neutral, clear, solvent-free, low-modulus silicone suitable for mirrors or glass.

Avoid solvent-based adhesives.

Protect the glass

Place the Pattern Piece face-down on a clean towel or blanket while you apply the adhesive.

Avoid putting the glass directly onto a hard worktop or floor, and take particular care with the edges and corners.

Apply the adhesive

Apply small, evenly spaced blobs of silicone to the back.

Keep the adhesive slightly away from the edges so it doesn't squeeze out when the glass is pressed against the wall.

You want enough adhesive to support the whole panel evenly without creating unnecessarily thick areas behind it.

Position it

Lift the Pattern Piece into place and press it gently and evenly against the wall.

Check that it is sitting straight before leaving the adhesive to cure.

If one area feels hollow or springy, carefully lift the panel away, add a little more adhesive where needed and reposition it.

Leave it to cure

Keep the Pattern Piece safely in position while the silicone cures, following the adhesive manufacturer's instructions.

Don't disturb or put pressure on the panel until it is secure.

Do I need to grout it?

No.

A Pattern Piece is a single glass panel, not a set of tiles, so there are no grout lines or tile spacers involved.

If you want to seal around the edges, use a neat bead of suitable silicone.

Can I trim it?

No.

Pattern Pieces are made from toughened glass, so they cannot be cut, trimmed or drilled after manufacture.

Each finished panel is 500 × 200 mm.

Need a hand?

If you're unsure about positioning or preparing the wall, we're happy to help before you start.
